

BRAND IDENTITY & DESIGN SYSTEM

Briefly NewsStream

A scalable visual identity for an intelligent, real-time news platform.

Version 1.0 • Core identity, visual language, product UI foundations, communication, motion and implementation rules.

AI-powered. Personalized. Always brief. Always ahead.

The brand idea

Briefly NewsStream transforms the overwhelming flow of information into something clear, relevant and immediately useful. The identity should feel **fast without being chaotic, intelligent without feeling cold, and editorial without looking like a traditional newspaper.**

Positioning

An intelligent news stream that filters the noise and delivers the brief.

Purpose Help people understand what matters faster.	Promise Less noise. More signal.	Personality Clear, sharp, calm, informed.
Audience Professionals, curious readers, analysts and teams.	Category News intelligence × personalization × real-time stream.	Brand role Your intelligent filter between the world and your attention.

Core principles

- 01. Brief first.** Every experience should reduce cognitive load.
- 02. Signal over noise.** Visual emphasis must communicate priority.
- 03. Editorial intelligence.** Information hierarchy matters more than decoration.
- 04. Live, but calm.** Real-time does not mean visually frantic.

The layered news card

The logo combines three ideas: **a brief, an article card and a stream of information**. The front card contains a simplified editorial mark; the offset layers create depth, continuity and the feeling of an always-updating feed.

Construction rules

Primary	Icon + Briefly + NewsStream. Use for websites, product marketing and presentations.
Compact	Icon + Briefly. Use where the category is already understood.
Icon only	Use for app icons, favicons, avatars and compact navigation.
Monochrome	Use solid navy or white when gradients cannot reproduce reliably.

Clear space: maintain at least the width of the inner white editorial mark around all sides. **Minimum size:** icon 20 px digital / 7 mm print; full logo 140 px digital.

Information, depth & flow

The color system starts with deep editorial navy for trust and readability, then introduces a directional gradient from purple through blue to teal to represent information moving through the stream.

Editorial Navy #071A36 Primary text / dark UI	Signal Purple #5B2DBB Brand origin	Stream Indigo #3E4FC4 Bridge	News Blue #2D7BEA Digital action	Live Teal #18A7A1 Live / flow
---	--	------------------------------------	--	-------------------------------------

Supporting neutrals

White #FFFFFF	Cloud #F7F9FC	Divider #DCE3EE	Muted #667085	Text #172033
------------------	------------------	--------------------	------------------	-----------------

Gradient rule

Primary gradient: #5B2DBB → #3E4FC4 → #2D7BEA → #18A7A1. Use gradients selectively on brand marks, key moments and premium surfaces—not on body text or every component.

Editorial clarity meets product precision

Recommended system: **Inter** for product UI and interface consistency. Use **Manrope** or **Inter Tight** as the optional expressive display face for marketing. Keep the product UI to one family whenever simplicity is preferred.

Scale	Weight	Use
Display / 48–72	Bold / 700–800	Big statements, campaign headlines
H1 / 32–40	Bold / 700	Page titles
H2 / 24–28	SemiBold / 600	Section hierarchy
H3 / 18–20	SemiBold / 600	Cards and modules
Body / 14–16	Regular / 400–500	Reading and UI
Meta / 11–13	Medium / 500	Sources, timestamps, labels

Editorial hierarchy

A news card should always prioritize: **1. headline** → **2. why it matters** → **3. source/time** → **4. supporting metadata**. Do not allow category badges, icons or decorative graphics to compete with the headline.

The interface language

The product should feel like an **intelligent editorial workspace**: spacious, structured and highly scannable. Cards represent individual pieces of information; streams represent movement through time.

Grid 8 pt base spacing system. Common gaps: 8, 12, 16, 24, 32, 48.	Radius 8 px small • 12 px standard • 16 px featured • 24 px hero.	Elevation Prefer borders and subtle tonal separation. Heavy shadows only for floating layers.
Cards White surface, 1 px #DCE3EE border, clear metadata, headline dominant.	Buttons Primary navy. Gradient reserved for high-value brand moments or special actions.	Icons Simple outlined geometry, 1.5–2 px stroke, never decorative overload.

Information states

Breaking	DANGER	High urgency, sparingly used
Live	TEAL	Active or continuously updating
Trending	PURPLE	High discussion / momentum
Saved	BLUE	Personal collection
Verified	SUCCESS	Confirmed / trusted signal

A reusable system, not a collection of screens

News Card	Category/meta → headline → short context → source/time → optional image. Featured cards may use larger media.
Stream Row	Timestamp or live marker + concise headline + source. Optimized for scanning.
Brief Summary	3–5 concise points. Lead with impact, not chronology.
Topic Pill	Neutral by default. Color only when meaningfully categorizing a signal.
Source Badge	Text-first and discreet. The source should build trust without becoming advertising.
Filter Control	Outlined or soft surface. Active state uses navy or controlled brand accent.
Insight Module	A distinct surface for AI synthesis, clearly labelled to avoid confusing generated insight with source reporting.

Smart. Brief. Human.

The voice should sound like the most informed person in the room who does not need to prove it.

Clear	Use short, direct sentences. Lead with the news.
Intelligent	Add context and significance, not unnecessary complexity.
Calm	Breaking information should remain composed and readable.
Human	Avoid robotic AI language and empty hype.

Messaging examples

Good: “The story, in 60 seconds.”

Good: “What changed—and why it matters.”

Good: “Your news. Filtered for relevance.”

Avoid: “Revolutionary AI-powered next-generation news ecosystem.”

The stream should move with purpose

Motion is part of the identity. Cards can slide into sequence, layers can stack and separate, and the gradient can travel subtly through the icon. Movement should suggest **new information entering a filtered stream**.

Duration	Micro: 120–180 ms • standard: 220–320 ms • hero: 500–800 ms
Easing	Fast-in, smooth-out. Avoid bouncy consumer-app motion.
Logo animation	Cards enter sequentially, align, then reveal the editorial mark.
Live state	Subtle pulse or flowing accent—not flashing alerts.

Social & marketing templates

Build around four repeatable formats: **Brief** (one story), **Signal** (trend or data), **Explained** (context carousel), and **Stream** (live updates). Use one dominant headline, one supporting visual or data point and restrained brand framing.

Clarity is a brand requirement

- Use sufficient text contrast; do not place small text directly over multicolor gradients.
- Do not use color as the only indicator of breaking, live or verified states.
- Support keyboard focus with a visible high-contrast focus ring.
- Respect reduced-motion preferences; all motion must have a static equivalent.
- Keep touch targets at least 44 × 44 px where practical.
- Use semantic headings and source labels so information hierarchy survives beyond visual styling.

Design tokens

Color: brand.navy, brand.purple, brand.indigo, brand.blue, brand.teal

Space: 4, 8, 12, 16, 24, 32, 48, 64

Radius: 8, 12, 16, 24

Type: display, h1, h2, h3, body, meta

Semantic: info, success, warning, danger, live, breaking

Briefly NewsStream

A modern news intelligence identity built around one simple idea:

The world is a stream.
Briefly helps you see the signal.

Primary visual assets

Layered news-card logo • Editorial Navy • Purple → Blue → Teal signal gradient • Spacious information hierarchy • Calm, intelligent motion
